## OUR MISSION

Two Degrees was founded to help combat childhood malnutrition, which affects over 200 million children worldwide. By providing a nutrition pack for every food bar sold, Two Degrees hopes to put a serious dent in this staggering number.

Nutrition packs are medically formulated to fight childhood malnutrition – and they work. They have up to a 95% success rate and are endorsed by the World Health Organization. Unfortunately, these packs only reach a fraction of the children who need them.

## OUR PARTNERSHIPS

Two Degrees Food carefully selects its partners to ensure that malnourished children receive high-quality treatment from dedicated, local health workers. Our charter partnerships are with Valid Nutrition and Partners in Health. Valid Nutrition manufactures medically formulated packs, known as Ready-to-Use Therapeutic Foods (RUTFs). The World Health Organization endorses the use of RUTF for the treatment of moderate to severe acute malnutrition in children under-five. Partners In Health is a global organization that provides health care interventions in poor communities. This past February, Two Degrees Food donated 10,800 RUTF packs from Valid Nutrition's manufacturing location in Lilongwe, Malawi to Partners In Health's program offices in southern Malawi. We are committed to continuing our work with partners who combine expertise in the formulation, manufacturing and distribution of cutting-edge Ready-to-Use Foods to treat the spectrum of malnutrition.
